

Program Name: Bachelor of Engineering

Level: UG Branch: ALL

Course / Subject Code: BE01000091

Course / Subject Name: Mechanics of Solids

w. e. f. Academic Year:	2024-25
Semester/Year	1 st Year
Category of the Course:	ESC

Prerequisite:	NA
Rationale:	The branch of Applied science that deals with state of rest or the state of motion is
	termed as Mechanics. Starting from the analysis of rigid bodies under gravitational
	force and simple applied forces the mechanics has grown to the analysis of robotics,
	aircrafts, space crafts under dynamic force, atmospheric forces, temperatures forces
	etc.
	The principal of mechanics developed around state of rest and state of motion of the
	bodies by Sir Issac Newton which is termed as three laws of motion and the laws of
	gravitation. The mechanics based on these laws is called classical mechanics or
	Newtonian mechanics.
	Engineers are keen to use laws of mechanics to actual field problems. Application
	of laws of mechanics to field problems is termed as engineering mechanics. Here
	the students will learn the laws and principals of mechanics along with their
	applications to engineering problems. As a matter of fact knowledge of mechanics
	of solids is very essential for an engineer in planning, designing and construction of
	various types of structures and machines, so that the design is safe and economical.

Course Outcome:

After Completion of the Course, Student will able to:

No	Course Outcomes	RBT Level
01	Apply fundamental principles of mechanics, equilibrium and statics to practical problems of engineering.	R/U
02	Determine centroid and moment of inertia of a different geometrical shape and	
	its use in engineering problem. Determine different types of stresses and strains developed in the member	R/U
03	subjected to axial, bending, shear, torsion & thermal loads.	10.0
04	Differentiate behaviour and properties of different engineering materials.	U/A
05	Apply the basics of simple machines and their working mechanism	R/U

^{*}Revised Bloom's Taxonomy (RBT)

Program Name: Bachelor of Engineering

Level: UG Branch: ALL

Course / Subject Code: BE01000091

Course / Subject Name: Mechanics of Solids

Teaching and Examination Scheme:

Teaching Scheme (in Hours) Total Credits L+T+ (PR/2) Assessment Pattern and			ı and Marks		Total			
				Theory Tutorial / Practica		Practical	Marks	
L	T	PR	С	ESE (E)	PA / CA (M)	PA/CA (I)	ESE (V)	
				(E)	(1V1)			
3	-	2	4	70	30	20	30	150

Course Content:

Sr. No.	Name of Topic	Teaching Hours	% Weightage
	MODULE 1		•
1	Introduction Definition of space, time, particle, rigid body, deformable body. Force, types of forces, Characteristics of a force, System of forces, Composition and resolution of forces. Fundamental Principles of mechanics: Principle of transmissibility, Principle of superposition, Law of gravitation, Law of parallelogram of forces, Newton's Laws of Motion.	02	
2	Fundamentals of Statics Coplanar concurrent and non-concurrent force system: Resultant, Equilibrant, Free body diagrams. Coplanar concurrent forces: Resultant of coplanar concurrent force system by analytical and graphical method, Law of triangle of forces, Law of polygon of forces, Equilibrium conditions for coplanar concurrent forces, Lami's theorem. Application of these principles. Coplanar non-concurrent forces: Moments & couples, Characteristics of moment and couple, Equivalent couples, Force couple system, Varignon's theorem, Resultant of non-concurrent forces by analytical method and graphical method, Equilibrium conditions of coplanar non-concurrent force system, Application of these principles. Concept of statically determinate and indeterminate problems.	10	25
	MODULE 2	•	•
3	Applications of fundamentals of statics Statically determinate beams: Types of loads, Types of supports, Types of beams; Determination of support reactions, Relationship between loading, shear force & bending moment, Bending moment and shear force	06	15

Program Name: Bachelor of Engineering

Level: UG Branch: ALL

Course / Subject Code: BE01000091

Course / Subject Name: Mechanics of Solids

	diagrams for beams subjected to only three types of loads :i) concentrated loads ii) uniformly distributed loads iii) couples and their combinations; Point of contraflexure, point & magnitude of maximum bending moment, maximum shear force					
4	Stresses in Beams: Flexural stresses – Theory of simple bending, Assumptions, derivation of equation of bending, neutral axis, determination of bending stresses, section modulus of rectangular & circular (solid & hollow), I Sections Shear stresses – Derivation of formula, shear stress distribution across various beam sections like rectangular, circular, I sections. MODULE 3	06	15			
	Centroid and moment of inertia and mass moment of inertia					
5	Centroid: Centroid of lines, plane, areas and volumes, Examples related to centroid of composite geometry, Moment of inertia of planar cross-sections: Derivation of equation of moment of inertia of standard lamina using first principle, Parallel & perpendicular axes theorems, polar moment of inertia, radius of gyration of areas, section modulus. Examples related to moment of inertia of composite geometry	08	20			
6	Introduction to Torsion: Assumptions, theory of torsion equation to solid & hollow circular shaft, torsional rigidity	02	05			
	MODULE 4					
7	Simple stresses & strains Basicsofstressandstrain:3D state of stress(Concept only) Normal/axial stresses: Tensile & compressive Tangential Stresses: Shear and complementary shear Strains: Linear, shear, lateral, thermal and volumetric. Hooke's law, Elastic Constants: Modulus of elasticity, Poisson's ratio, Modulus of rigidity and bulk modulus and relations between them with derivation. Application of normal stress & strains: Homogeneous and composite bars having uniform & stepped sections subjected to axial loads and thermal loads	08	20			
	MODULE 5					
8	Physical & Mechanical properties of materials: (laboratory hours) Physical & Mechanical properties of materials: (laboratory hours) Elastic, homogeneous, isotropic materials; Stress –Strain	This portion to be covered in	Theory Weightage shall be 0%			

Program Name: Bachelor of Engineering

Level: UG Branch: ALL

Course / Subject Code: BE01000091

Course / Subject Name: Mechanics of Solids

	relationships for ductile and brittle materials, limits of elasticity and proportionality, yield limit, ultimate strength, strain hardening, proof stress, factor of safety, working stress, load factor, Properties related to axial, bending, and torsional & shear loading, Toughness, hardness, Ductility, Brittleness	Laboratory	
9	Simple Machines: (laboratory hours) Basics of Machines, Definitions: Velocity ratio, mechanical advantage, efficiency, reversibility of machines. Law of Machines, Application of law of machine to simple machines such as levers, pulley and pulley blocks, wheel and differential axle, Single purchase, double purchase crab, screw jacks. Relevant problems		

Suggested Specification Table with Marks (Theory):

Distribution of Theory Marks (in %)							
R Level U Level A Level N Level E Level C Level							
35	40	25	-	-	-		

Where R: Remember; U: Understanding; A: Application, N: Analyze and E: Evaluate C: Create (as per Revised Bloom's Taxonomy)

Program Name: Bachelor of Engineering

Level: UG Branch: ALL

Course / Subject Code: BE01000091

Course / Subject Name: Mechanics of Solids

- 15. Mechanics of Materials Timoshenko and Gere
- 16. Mechanics of Materials Beer and Johnston.

(b) Open source software and website:

1. http://nptel.ac.in/

Suggested Course Practical/Assignment List:

The students will have to solve at least five examples and related theory from each topic as an assignment/tutorial. Students will have to perform following experiments in laboratory and prepare the laboratory manual.

Mechanics of rigid body

- 1. Equilibrium of coplanar concurrent forces
- 2. Equilibrium of coplanar non-concurrent forces
- 3. Equilibrium of coplanar parallel forces: Determination of reactions of simply supported beam
- 4. Verification of principle of moment: Bell crank lever
- 5. Determination of member force in a triangular truss
- 6. Determination of parameters of machines (Any two)
 - (a) Wheel and differential axles
 - (b) Single purchase crab
 - (c) Double purchase crab
 - (d) System of pulleys

Mechanics of deformable body

- 1. Determination of hardness of metals: Brinell /Vicker/Rockwell hardness test
- 2. Determination of impact of metals: Izod/Charpy impact test
- 3. Determination of compression test on
 - a. Metals mild steel and cast iron
 - b. Timber along and parallel to the grains
- 4. Determination of tensile strength of metals
- 5. Determination of shear strength of metals

List of Laboratory/Learning Resources Required:

- 1. Force table
- 2. Beam setup
- 3. Bell crank lever

Program Name: Bachelor of Engineering

Level: UG Branch: ALL

Course / Subject Code: BE01000091

Course / Subject Name: Mechanics of Solids

- 4. Friction setup
- 5. Lifting machine
- 6. Hardness testing machine
- 7. Impact testing machine
- 8. Universal testing machine with shear attachment
